REQUIREMENT ANALYSIS

Customer Journey Map

Date	11 October 2026
Team ID	SWTID-2026-7837
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Customer / User

Primary users: IT procurement requester and Hardware team member involved in the Standard Laptop procurement process. The journey focuses on how an approved laptop request moves from submission and approval to automatic Catalog Task creation and assignment for hardware configuration.

Journey Objective

Understand how users move through the Standard Laptop procurement workflow and how Flow Designer removes manual task creation and assignment after approval.

CUSTOMER JOURNEY

Journey Stage	User Goal / Action	Touchpoint & System Response	Thoughts / Feelings	Pain Points	Opportunity / Project Response
1. Submit Standard Laptop Request	Submit a Standard Laptop request through the Service Catalog.	The user interacts with the Service Catalog and creates the relevant Requested Item.	“I want to request the laptop easily and know that my request is recorded.”	Manual or unclear procurement steps can create uncertainty about what happens next.	Use the Service Catalog and Requested Item as the starting point for a structured procurement workflow.
2. Request Enters Approval	Wait for the Standard Laptop request to be reviewed and approved.	The request moves through the approval process. The approved Requested Item becomes the trigger point for the automation.	“Once approved, I expect the next processing step to happen automatically.”	Manual follow-up after approval can delay the next procurement activity.	Connect the approval outcome to the Flow Designer automation.
3. Approval is Completed	Have the approved request processed without manual coordination.	Flow Designer detects the approved Standard Laptop request and starts the configured workflow.	“I should not have to contact another person just to create the next task.”	Manual task creation can cause delays and inconsistent processing.	Automatically initiate the Catalog Task creation step after approval.
4. Catalog Task is Created	Ensure the approved request becomes an actionable hardware task.	ServiceNow automatically creates a Catalog Task for the approved Standard Laptop request.	“The approved request has moved forward clearly.”	Without automation, a task could be missed or created late.	Automate Catalog Task creation to improve visibility and processing continuity.
5. Task is Assigned to Hardware Team	Ensure the Hardware team receives the task for configuration.	The generated Catalog Task is automatically assigned to the Hardware team.	“The correct team should receive the task without manual routing.”	Manual assignment can introduce errors or delay the start of configuration.	Automatically assign the Catalog Task to the Hardware team.
6. Hardware Configuration Begins	Start laptop configuration promptly using the assigned task.	The Hardware team sees the actionable Catalog Task and begins the Standard Laptop configuration process.	“The request is ready for the team to act on.”	Delayed task visibility can postpone hardware preparation.	Provide a consistent approval-to-task flow so configuration can begin promptly.

Customer Journey Insight

Key Area	Project Insight
Need	A simple, predictable procurement journey in which an approved Standard Laptop request automatically progresses to the hardware configuration task.
Main Pain Point	Manual creation and assignment of Catalog Tasks can introduce delays, reduce visibility, and create opportunities for manual errors.
Expected Experience	After approval, the user should know that the required task has been created and routed to the Hardware team without additional manual coordination.
Project Response	Flow Designer connects the Service Catalog, Requested Item, approval process, and Catalog Task to automate the approval-to-task transition.

The completed journey shows how the project reduces manual intervention between approval and hardware configuration. The key project value is a consistent and efficient transition from an approved Standard Laptop request to an actionable Catalog Task assigned to the Hardware team.
