IDEATION PHASE

Define the Problem Statements

Date	11 October 2026
Team ID	SWTID-2026-7837
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand the customer's point of view. The statement focuses on the customer's needs, the task they are trying to accomplish, the barriers they experience, why those barriers occur, and the resulting impact.

A well-articulated customer problem statement provides a clear foundation for developing an appropriate solution to the Standard Laptop procurement challenge.

Project-Specific Problem Statements

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an IT procurement requester / employee	request a Standard Laptop and have the approved request processed efficiently	approved laptop requests may require manual creation and assignment of procurement or configuration tasks	the process can depend on manual intervention after approval	concerned about delays, missed tasks, and inconsistent processing
PS-2	a Hardware team member	receive approved Standard Laptop requests as actionable configuration tasks	the required Catalog Task may not be created and assigned immediately after approval	task creation and assignment can otherwise require manual coordination	frustrated by delayed task visibility and concerned about starting configuration on time

Project Context

The Standard Laptop Procurement Automation project is a ServiceNow solution designed to streamline IT hardware procurement using Flow Designer. When a Standard Laptop request is approved, the automation creates a Catalog Task and assigns it to the Hardware team for configuration.

Problem-to-Solution Alignment

Identified Problem	Project-Relevant Response
Manual task creation after approval	Automatically create a Catalog Task when the Standard Laptop request is approved.
Manual task assignment	Automatically assign the Catalog Task to the Hardware team.
Delayed task visibility and processing	Create and assign the task immediately as part of the automated flow.
Manual errors and inconsistent processing	Use Flow Designer to provide a consistent approval-to-task workflow.
