IDEATION PHASE

Empathy Map Canvas

Date	11 October 2026
Team ID	SWTID-2026-7837
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

User / Customer

Primary users: IT procurement requester and Hardware team member involved in processing Standard Laptop requests. The empathy map focuses on the user's experience from submitting a Standard Laptop request through approval and hardware configuration task assignment.

EMPATHY MAP

SAYS	THINKS	DOES	FEELS
“I want my approved laptop request to be processed without unnecessary delay.” “The next task should be created automatically.” “The Hardware team should receive the task clearly.”	“Why should someone manually create a task after approval?” “The approved request should move to the next step automatically.” “I need clear visibility of what happens after approval.”	Submits a Standard Laptop request. Waits for approval. Tracks the request and expects the Hardware team to process it. Hardware team member begins configuration after receiving the task.	Confident when the process moves automatically. Concerned about delays when manual task creation is required. Frustrated by poor task visibility or inconsistent assignment.

PAINS / PROBLEMS

Pain Point	Project Context
Manual task creation	After a Standard Laptop request is approved, creating the required Catalog Task manually can introduce unnecessary effort and delay.
Manual task assignment	The approved request may require manual assignment to the Hardware team before configuration can begin.
Delayed task visibility	Without automation, the Hardware team may not receive an actionable task immediately after approval.
Inconsistent processing	Manual steps can lead to missed tasks, inconsistent processing, and avoidable errors.

NEEDS / GAINS

Need / Gain	Expected User Benefit
Automatic task creation	A Catalog Task is created automatically when the Standard Laptop request is approved.
Automatic assignment	The generated Catalog Task is assigned to the Hardware team for configuration.
Faster processing	The Hardware team can begin configuration promptly without waiting for manual task creation.
Consistent workflow	Flow Designer provides a repeatable approval-to-task process and reduces manual errors.
Improved visibility	The Catalog Task makes the next procurement activity clearly actionable for the Hardware team.

EMPATHY MAP INSIGHT

The IT procurement user needs a process that moves an approved Standard Laptop request to the Hardware team without unnecessary manual coordination. The key user need is continuity between approval and configuration. Flow Designer addresses this need by automatically creating a Catalog Task and assigning it to the Hardware team, improving task visibility, reducing delays, and minimizing manual errors.
