REQUIREMENT ANALYSIS

Solution Requirements

Date	11 October 2026
Team ID	SWTID-2026-7837
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Problem Description

The Standard Laptop Procurement Automation project is a ServiceNow solution designed to streamline the IT hardware procurement process using Flow Designer. The project automates the creation of a Catalog Task when a Standard Laptop request is approved and assigns the task to the Hardware team for configuration.

This automation eliminates the need for manual task creation and assignment, ensuring that approved laptop requests are processed consistently and efficiently. It improves task visibility, reduces delays, minimizes manual errors, and enables the Hardware team to begin laptop configuration promptly.

Solution Objective

The solution shall provide an automated, consistent transition from an approved Standard Laptop request to an actionable Catalog Task assigned to the Hardware team. The workflow shall integrate the Service Catalog, Requested Items, Approvals, Flow Designer, and Catalog Tasks to support the procurement process.

Functional Requirements

ID	Requirement	Expected System Behavior	Implementation
FR-01	Standard Laptop approval trigger	When the Standard Laptop request is approved, the automation shall start the configured procurement flow.	Flow Designer flow using the approved request as the workflow trigger/condition.
FR-02	Catalog Task creation	A Catalog Task shall be created automatically for an approved Standard Laptop request.	Flow Designer action to create the required Catalog Task.
FR-03	Hardware team assignment	The generated Catalog Task shall be assigned to the Hardware team for laptop configuration.	Flow Designer action to set the Catalog Task assignment to the Hardware team.
FR-04	Service Catalog integration	The automation shall operate on the Standard Laptop request created through the Service Catalog and its Requested Item.	Service Catalog and Requested Item provide the procurement request context used by the flow.
FR-05	Approval integration	The workflow shall process the request based on its approval outcome.	Approval status is evaluated before the Catalog Task creation step.
FR-06	End-to-end workflow continuity	The approved request shall move from approval to task creation and assignment without requiring manual task creation.	Flow Designer coordinates the approval-to-Catalog Task transition.
FR-07	Task visibility	The created Catalog Task shall provide the Hardware team with a clear actionable work item.	Catalog Task record is created and routed to the Hardware team.
FR-08	Consistent processing	Approved Standard Laptop requests shall follow the defined automated process.	A configured Flow Designer workflow applies the same task creation and assignment logic.

Non-Functional / Quality Requirements

ID	Requirement Area	Project Requirement
NFR-01	Usability	The automation should reduce manual coordination and provide a clear next task for the Hardware team.
NFR-02	Consistency	Approved Standard Laptop requests should follow the same defined task creation and assignment process.
NFR-03	Efficiency	The workflow should reduce delays between request approval and hardware configuration.
NFR-04	Data / Process Integrity	The flow should create and assign the Catalog Task according to the defined procurement workflow.
NFR-05	Maintainability	The procurement automation should remain identifiable and manageable as a Flow Designer workflow.
NFR-06	Visibility	The generated Catalog Task should make the next hardware activity visible and actionable.

Requirement-to-Problem Alignment

Problem	Corresponding Requirement
Manual Catalog Task creation after approval	FR-01, FR-02 and FR-06 automate the transition from approval to task creation.
Manual assignment to Hardware team	FR-03 automatically assigns the generated task to the Hardware team.
Delayed task visibility	FR-07 provides an actionable Catalog Task after approval.
Inconsistent processing and manual errors	FR-08 establishes a consistent automated workflow.

Acceptance Conditions

• An approved Standard Laptop request initiates the defined automation.

• A Catalog Task is created automatically for the approved request.

• The Catalog Task is assigned to the Hardware team.

• No manual Catalog Task creation is required for the automated path.

• The resulting task provides the Hardware team with an actionable work item.
